Rohan Bhangui

Toronto, ON │ linkedin.com/in/rohanbhangui │ 416-807-4019 │ rohan@bhangui.com

Summary

- Frontend-focused full-stack engineer with 7+ years of experience building scalable internal tools, design systems, and reusable component libraries
- Specializes in modern React and TypeScript applications optimized for performance, accessibility, and team scalability
- Experienced in frontend platform engineering including state management strategies, rendering optimizations, and CI/CD for web apps
- Passionate about improving developer experience, enabling design consistency, and building foundations that scale across teams

Experience

Full-Stack Software Engineer III
theScore Inc. │ Nov 2023 - Present
Working on identity core services used for KYC and authentication

- Working on internal identity services with a strong focus on frontend architecture and developer enablement
- Built shared components and flows for authentication and KYC, improving consistency and reducing redundancy across products
- Introduced rendering performance optimizations for React pages tied to user onboarding and auth workflows
- Collaborated with backend engineers to shape APIs optimized for frontend usage and reliability
- Maintained a suite of frontend tools and helpers to improve dev onboarding and cross-team feature velocity

Senior Software Engineer
Borderless Inc. │ Jul 2021 - Nov 2023
Working on building tools for B2B customers to organize and manage their flexible workforce.

- Led modernization of legacy frontend systems into modular, scalable libraries using React and TypeScript
- Replaced Redux with React Query, reducing fetch boilerplate and improving data consistency across modules

- Created reusable component kits and layout primitives adopted across multiple apps
- Built internal documentation and Storybook instances to support consistent dev experience across frontend squads
- Championed performance budgeting, resulting in faster initial load and lower bundle sizes

Software Developer
ATP Inc. | Oct 2019 - Jul 2021
Developed troubleshooting software for Tier-1 clients, specifically in the aeronautics sector ranging from OEMs to major international airliners.

- Built and designed React/Electron-based troubleshooting tools for Tier-1 airlines in a large monorepo environment
- Focused on designing robust interfaces that were modular, maintainable, and usable across varying technical skill levels
- Contributed to shared frontend infrastructure and reusable UI components for troubleshooting workflows

Frontend React Developer
VYANA Inc. | May 2019 - Sept 2019
Tasked with building complex react/redux based applications for Canadian construction/waste management giant.

- Built React/Redux-based management tools for large-scale operational logistics in the construction and waste sector
- Developed a reusable widget framework adopted across multiple micro frontends to ensure consistency and reduce dev time
- Worked closely with backend engineers to integrate APIs optimized for client-side rendering performance

Other Previous Experience and Freelance
Myself | 2015 - Present
Worked contract roles with enterprise clients including one of Canada's Big 5 banks, a pharmaceutical brand, and S&P Capital IQ. Focused on UI styling, React/AngularJS development, and responsive interfaces across agile teams.

Technical Skills

- **Languages:** JavaScript, TypeScript, HTML5, CSS3, Elixir
- **Frontend:** ReactJS, NextJS, Redux, React Query, Styled Components, Tailwind, Material UI
- **Backend:** NodeJS, ExpressJS, Elixir

- **Tools:** Git, Jira, Figma, Figjam
- **Internal Platform Projects:** Shared component libraries, internal CLIs, CI/CD workflows (GitHub Actions, Vercel), observability integrations (Logflare, Datadog)
