Rohan Bhangui

Toronto, ON | linkedin.com/in/rohanbhangui | rohan@bhangui.com

Summary

- Frontend-focused full-stack engineer with 7+ years of experience building scalable internal tools, design systems, and reusable component libraries
- Specializes in modern React and TypeScript applications optimized for performance, accessibility, and team scalability
- Experienced in frontend platform engineering including state management strategies, rendering optimizations, and CI/CD for web apps
- Passionate about improving developer experience, enabling design consistency, and building foundations that scale across teams

Experience

Senior Software Engineer
StackAdapt Inc. | August 2025 - Present
Working to build a better customer experience around creative generation for ads

- Building a more streamlined and optimized experience for uploading, creating and optimizing ad creative
- Creating templates from designs as a part of the company's template marketplace offering
- Optimizing ad creative performance and prototyping various methods for building templates with AI

Full-Stack Software Engineer III
theScore Inc. | Nov 2023 - June 2025
Working on identity core services used for KYC and authentication

- Built shared React components and authentication flows for KYC and onboarding, improving developer efficiency across teams
- Optimized page render speed and performance across user onboarding and auth workflows through deep profiling and targeted React optimizations
- Improved and benchmarked login query performance by 200%
- Collaborated with backend engineers to shape frontend-friendly API endpoints and reduce integration complexity
- Maintained internal CLI tools helper packages and relevant documentation to streamline frontend development and onboarding

Senior Software Engineer
Borderless Inc. | Jul 2021 - Nov 2023
Working on building tools for B2B customers to organize and manage their flexible workforce.

- Led the migration of legacy frontend systems into modern React + TypeScript libraries shared across multiple teams
- Replaced Redux with React Query, improving data consistency and reducing fetch-related boilerplate by 50%
- Built a reusable component library and layout system to support design consistency and rapid UI development
- Refactored core components to reduced initial load time and overall bundle size by 25%
- Championed documentation standards and internal Storybook instances to align dev workflows across squads
- Closely collaborated with design and product teams to deliver comprehensive features ahead of schedule

Software Developer
ATP Inc.| Oct 2019 - Jul 2021
Developed troubleshooting software for Tier-1 clients, specifically in the aeronautics sector ranging from OEMs to major international airliners.

- Developed and maintained React/Electron-based troubleshooting tools for Tier-1 airline clients in a large monorepo environment
- Focused on creating modular and accessible UIs for a wide range of user technical backgrounds
- Contributed to shared UI components and frontend infrastructure to streamline future feature development
- Collaborated across product, QA, and backend teams to ensure robustness in mission-critical debugging tools

Frontend React Developer
VYANA Inc. | May 2019 - Sept 2019
Tasked with building complex react/redux based applications for Canadian construction/waste management giant.

- Built operational tools using React and Redux for a major Canadian construction and waste management provider
- Developed a reusable widget framework adopted across micro frontends to improve consistency and dev speed
- Worked closely with backend teams to shape API responses and optimize client-side performance

Other Previous Experience and Freelance
Myself | 2015 - Present

Delivered responsive, styled React/AngularJS applications for enterprise clients including a Big 5 Canadian bank, a pharmaceutical brand, and S&P Capital IQ.Focused on UI/UX polish, design system alignment, and frontend architecture across Agile product teams.

Technical Skills

- **Languages:** JavaScript, TypeScript, HTML5, CSS3, Elixir
- **Frontend:** ReactJS, NextJS, Redux, React Query, Styled Components, Tailwind, Material UI
- **Backend:** NodeJS, ExpressJS, Elixir
- **Tools:** Git, Jira, Figma, Figjam
- **Internal Platform Projects:** Shared component libraries, internal CLIs, CI/CD workflows (GitHub Actions, Vercel), observability integrations (Sentry, Datadog)
